Question ***Exemplar 11.16.3.9 :***

Four candidates A, B, C and D have applied for the assignment to coach a school cricket team. If A is twice as likely to be selected as B, and B and C are given about the same chance of being selected, while C is twice as likely to be selected as D, what are the probabilities that

1) C will be selected?
2) A will not be selected?

Solution :

Given,

Parameter	Description
$\Pr(A)$	Probability of A being selected
$\Pr(B)$	Probability of B being selected
$\Pr(C)$	Probability of C being selected
$\Pr(D)$	Probility of D being selected

(1)

TABLE 2
PROBABILITIES OF SELECTION

$$\Pr(A) = 2\Pr(B) \tag{2}$$
$$\Pr(B) = \Pr(C) \tag{3}$$
$$\Pr(C) = 2\Pr(D) \tag{4}$$

Now,

From (3) and (4),

$$\Pr(B) = 2\Pr(D) \tag{5}$$
$$\implies \Pr(A) = 4\Pr(D) \tag{6}$$

From the Law of Total Probability,

$$\Pr(A) + \Pr(B) + \Pr(C) + \Pr(D) = 1 \tag{7}$$

Substituting (4), (5), (6) in (7)

$$4\Pr(D) + 2\Pr(D) + 2\Pr(D) + \Pr(D) = 1 \tag{8}$$
$$\implies \Pr(D) = \frac{1}{9} \tag{9}$$

1) From (4),

$$\Pr(C) = 2 \times \frac{1}{9} \tag{10}$$
$$\implies \Pr(C) = \frac{2}{9} \tag{11}$$

2) From (6)

$$\Pr(A) = 4 \times \frac{1}{9} \tag{12}$$
$$\implies \Pr(A) = \frac{4}{9} \tag{13}$$
$$\implies \Pr(A') = \frac{5}{9} \tag{14}$$
